IMPORTANT NOTICE

Everything in this White Paper, and any relevant material particular whatsoever connected therewith must be read with astute care and caution. If after a careful reading of everything, there is a persistence of doubt, which borders on the action you should take, you are therefore advised to consult your legal, financial, tax or other professional advisors.

There shall be no reproduction and dissemination of this White Paper in a manner that affects its integrity, including any relevant material whatsoever connected therewith.

CAUTIONARY NOTE ON “FORWARD-LOOKING STATEMENTS”

There are “forward-looking statements” contained in this White Paper. The meaning and intent of the term “forward-looking statements” are the same as they appear in any relevant statute of any jurisdiction whatsoever, or for instance, as they appear in the U.S. Private Securities Litigation Reform Act of 1995, which gives a comprehensive statutory clarity to the intendment of “forward-looking statements” concerning the business, operations, financial performance and condition of an entity, i.e. Curate, though situate outside the United States jurisdiction, equal parallel drawn is both essential and relevant.

Words and phrases such as “intends”, “anticipates,” “plans”, “estimate,” “expects,” “projects,” “believes,” “will” and other terms of similar substance and character, wherever found in the White Paper operate as guidance and indicators of “forward-looking statements”.

Furthermore, all statements regarding Curate, and/or its affiliates' business strategies, financial position, plans, prospects and the future of the industry which Curate and/or its affiliates are in, are "forward-looking statements". This "forward-looking statements" include, but are not limited to statements as to the Curate's and/or its affiliates' revenue and profitability, future plans, prospects, expected industry trends and other matters contained in this White Paper in regards to Curate, and/or its affiliates. These matters are not historical facts, but only predictions. All "forward-looking statements" are Curate's present expectations of future events and are subject to uncertainties and several other factors that could have a material difference in actual results from those described in the "forward-looking statements".

These factors and uncertainties include, amongst others:

- (a) Socio-political, economic changes, stock or crypto-assets market conditions, and the regulatory environment in the countries in which Curate and/or its affiliates conduct its/their respective businesses and operations;
- (b) The risk that Curate and/or its affiliates may be unable to execute or implement their respective business strategies and future plans;
- (c) Changes in the anticipated growth strategies and expected internal growth of Curate and/or its affiliates;
- (d) Changes in the availability and fortunes of Curate and/or its affiliates in connection with their respective businesses and operations;

- (e) Changes in the availability and salaries of employees who are required by Curate and/or its affiliates to operate their respective businesses and operations;
- (f) Changes in preferences of Curate and/or its affiliates;
- (g) Changes in the competitive conditions under which Curate, and/or its affiliates operate, and their ability to compete under such conditions;
- (h) Changes in the future capital needs of Curate, and/or its affiliates and the availability of financing and capital to fund such needs;
- (i) War or acts of international or domestic terrorism;
- (j) Occurrences of catastrophic events, natural disasters and acts of God that affect the businesses and/or operations of Curate and/or its affiliates;
- (k) And other factors beyond the control of Curate, and/or its affiliates.

Any prospective participant in this token sale is hereby cautioned to not rely upon any such "forward-looking statements", which speaks only as of the date they were made. Curate is not under any obligation, and expressly therefore disclaims any obligation whatsoever, to update or alter any "forward-looking statements", in the event of new information, future events or otherwise.

All subsequent “forward-looking statements” attributable to Curate, its affiliates or any person acting on their behalf are expressly qualified in their entirety by the cautionary statements referred to in this White Paper. Neither Curate nor any other person represents, warrants and/or undertakes that the actual future results, performance or achievements of Curate and/or its affiliates will be as contained in any “forward-looking statements”. The actual results, performance or achievements of Curate and/or its affiliates may differ in any material particular, from those anticipated in these “forward-looking statements”.

NO SECURITIES OFFERING OR REGISTRATION

For all intents and purposes, the Curate tokens will not constitute securities in any jurisdiction. This White Paper is not a prospectus; it does not constitute a document whose intent is to make securities offering of any kind in any jurisdiction. This White Paper does not create securities investment contract. The White Paper is not an opinion or a piece of advice to sell, or an offer by Curate or its affiliates to purchase the Curate tokens. No part of this White Paper whatsoever, not the fact of its presentation shall form the basis, or reliance in connection with a contract or investment decision, in a way that it will be caught by the extant securities regulation of any jurisdiction.

Every proceed from the Curate tokens that accrues from the token sale shall be applied to the Curate project financing, including Curate’s businesses and operations. There is no contractual obligation or a binding legal agreement to make any contribution whatsoever on the part of any person into Curate’s token sale. Any legally binding agreement that may exist between Curate, and or its affiliates and any person shall be contained in a separate document where the terms and conditions shall be duly set out in full detail.

Participation and eligibility criteria in any future token sale by Curate may vary, owing to the country of citizenship or residence. In this regard, no final and conclusive decision has been made, as regards municipal law, both legal and regulatory compliance in any jurisdiction in question would determine the relevant eligibility criteria and thus the subsequent participation in the future token sale. There is no regulatory examination or approval of any information contained herein, and no such action will be taken under the law, as none is required under any law whatsoever.

NO REPRESENTATIONS AND WARRANTIES

Curate and/or its affiliates do not make or purport to make, and hereby disclaim any representation, warranty or undertaking in any form whatsoever to any person in law or any person having legal or equitable right(s) including any representation, warranty or undertaking in relation to the truth, accuracy and completeness of any information set out in this White Paper.

Disclaimer

The CURATE team expresses their heartfelt gratitude to our readers for obtaining a copy of our whitepaper and taking the time to go through its contents. This document acts as a memorandum to explain our project and its objectives to our readers.

This special section has been prepared for our dear readers to examine thoroughly and we strongly urge our readers not to skip this section as it is crucial to determining the choices an individual takes when contributing to our project.

The major purpose of this whitepaper is to unfold and show the Curate project to potential clients and prospective token holders. Its contents have been simplified for ease of comprehension for everyone and gives each user the chance to decide if they want to be a part of our project based on their perception.

The information provided in this document cannot be considered as a means of solicitation or a prospectus. It does not constitute a means for buying securities neither does it serve as a contractual relationship of any kind. This document has not been assessed by any regulatory body and is not subject to any laws, rules or regulations.

The estimations and projections made in this document are not absolute and as such may be subject to change under different circumstances affecting cryptocurrencies and markets. These projections are uncertain and differences may occur between what is documented and real life events.

We implore you to consult your legal adviser before investing in any form of cryptocurrency to avoid penalties from the government. The sales of our token will only be made available to those who are eligible and legally qualified to purchase crypto-asset after white-listing through due diligence; Anti-Money Laundering (AML)/Know Your Client (KYC) compliance with the same regional and international standards set for financial institutions, financial technology companies, payment infrastructures, and money transmitter businesses by the international standard-setting body Financial Action Task Force (FATF) Recommendation 16, which encompasses Virtual Asset Service Providers (VASPs) and convertible virtual crypto-assets.

In a scenario that you purchase crypto-asset of any kind without obeying the rules guiding crypto-asset utilization in your area of residence, you risk legal actions being taken against you and this might incur fines or loss of your crypto-assets due to confiscation. If this happens, the CURATE team will not be liable or held responsible as whatever consequences that results from you buying our tokens/crypto-assets..

All the information provided in this document has been deemed accurate to a very considerable extent, and even though we would not like to fully acclaim this statement, we believe that to the best of our knowledge, this project has been considered concise. Depending on the various risks and uncertainties that befall crypto-assets,, this document could become less accurate. We implore our readers to take the time to read and understand various dangers that could arise as a result of getting involved in crypto-assets, because we cannot highlight them all for brevity of this project white paper.

Some of such unfortunate happenings that may befall crypto-assets are:

- Security risks whereby a person's crypto-assets are lost as a result of not being able to secure their login credentials properly on their own part.
- Issues such as technical problems may come as a result of server downtimes or errors may also occur which may temporarily hinder transactions carried out on the platform.
- High crypto-asset market volatility is another issue that needs to be considered as the price of a crypto-asset may fluctuate heavily whereby the value becomes very unstable and subject to constant change.

The information provided in this document may be subject to change such as translations over a period of time and this document might be made available in other languages aside the official one. During translation, some or most of the information in this document may become inconsistent, lost, corrupted or misinterpreted and its accuracy may be compromised. In the scenario that such changes occur to this document, the official document which is made available in English language shall be considered superior and final.

We advise you to get the original copy of our document from official means which is through our team members as getting it through an external source could mean the document is compromised or its contents being tampered with. Obtaining this document from our official sources reduces the chances of getting information that is manipulated, misinterpreted or contorted.

By reading this document, you agree you will comply strictly with the content, and not act in regard, and if you participate therefore in the Curate project utility token offering exercise, you have assumed any unforeseen risks and emergencies, which are intrinsic to every project, and therefore, neither the Curate Team, nor H-Pharm Ltd, nor their affiliate would be held liable in any event whatsoever.

Abstract

CURATE is a blockchain-based fashion platform centered round fashion discovery between individuals and firms alike. It can be likened to a social media network focused on fashion lovers and enthusiasts, but in this case also utilizes the decentralized blockchain network as a payment infrastructure means of providing royalties and rewarding content creators. We simply appreciate the effort everyone puts into being creative and such creativity is rewarded for everyone to display their workmanship skills, and therefore be incentivized in the process.

The idea is to implement a way to reward each and every one for spending their time to contribute to the Curate fashion discovery platform. This will help build and strengthen the fashion community because participation is going to be on the increase due to the fact that transparency and accountability of transactions are intrinsic values and features, and not bugs in the decentralized blockchain network, atop which the Curate fashion discovery platform is built. And this is coupled with the fact that each person is being rewarded based on their own unique content.

With our platform, it becomes easier for fashion lovers to interact with designers all over the world, and companies or firms in need of an individual's creative effort can interact with these designers or even gift them with work endorsement. The Curate blockchain fashion discovery platform's unique value proposition and Unique Selling Point(USP) are its ability to provide a robust decentralized network that connects people all over the world, and rewards each person based on the contribution made to grow the fashion discovery platform.

Introduction

As at the time of writing this document, about 2,500 crypto-assets have been released and these numbers keep climbing daily because the blockchain network has numerous use cases and this has spanned across healthcare, supply chain management, logistics industry, financial services industry, gaming, trading and a lot more. The goal here is to adopt and implement the blockchain technology in another area of daily life, which is the fashion industry use case.

The whole world is shifting from its traditional way of doing things to the advanced and sophisticated ways which slowly is getting incorporated into the fashion industry. It is obvious that companies keeping up with today's fast-paced, all-singing and all-dancing tech innovations are the ones that will survive the continuously changing system in the emergent Fourth Industrial Revolution (FIR), led by the next Internet technologies like blockchain, other Distributed Ledger Technologies (DLTs), or others like crypto-asset technology, smart contracts, Artificial Intelligence (AI), Virtual Reality (VR), Internet of Things (IoT) and the rest of the disruptor gang.

CURATE is a style discovery decentralized app (DApp) i.e 'blockchain smart contract enabled' platform, which rewards you with digital tokens in the form of BTC, ETH and our own CUR8 tokens in return for users curating fashion styles.

Fashion brands and retailers have partnered up with Curate to showoff their latest styles, raise brand awareness and increase their online sales. In return, Curate provides a trustless platform allowing users to feedback a curated collection of fashion styles for the community to discover. To put simply, Fashion brands partner up with Curate and we pass on the rewards to the curators and discoverer's. We are: Decentralised. Web 3.0. Open Source.

CURATE
Platform

Content user (i.e brand or fashionista)
uploads fashion content to Curate

'Curator' community engages
and upvotes fashion content

Content gains popularity allowing
community to discover content

Curate rewards both original content
user, curator and discover users with
BTC, ETH and CUR8 tokens

Problems

There is no single point of call when it comes to where and how to get fashion inspiration and ideas. In the scenario that one does find a platform that caters to fashion related ideas, they might not be diversified in their ideas, and thus taking away the uniqueness and diversity of ideas.

The internet has made the world a global village and as such, searching for whatever you need has become a lot easier compared to before. People looking for unique content on the other hand might find it harder to discover what they need since the internet can be fond of providing generic content. Quality content may not be readily available because there is little to no form of inspiration to act as a driving force. The designers love their work but the absence of some sort of reward or compensation is enough to deter them from doing their job the best way they can.

There is also the issue of platforms being plagued with deceptive feedbacks and far from objective reviews. A lot of the platforms we have today do not have any form of transparency and as such cases can be discovered of people who do not have unique or genuine content yet they have a lot of positive ratings which in the long run mislead the people.

Asides from all mentioned above, there is also the crowdfunding approach which has been popular among most blockchain and crypto-asset startups today. The crypto-asset space legacy Initial Coin Offering (ICO) mechanism is not what it used to be. This is because there have been many reports as to investors losing a huge amount of their investment due to different ICO events turning out to be total sham and scam. This kind of fraud practice and criminal behaviour in the crypto-asset world has made a lot of otherwise savvy and interested investors stay away, as they would rather not get burned on their first ICO investment attempt.

Solutions

The CURATE decentralized fashion discovery platform offers a one stop solution to people looking for fashion inspiration and ideas. CURATE platform provides a discovery platform for both men's and women's luxury fashion, and as time goes on we will boast of the best decentralized crypto-asset based fashion platform the world has to offer. The fact that we act as curators also means that we will have a huge library and collection of fashion trends from designers world over which also means that people have different unique styles to pick from.

The CURATE platform is also rewarding the contributors. Every idea posted by them will generate some sort of reward for them in digital tokens. This will also serve as a form of motivation for them to post more bright ideas and quality contents. Of course, this does not mean that the reward is the driving force behind the contributor involving themselves in our project, but it serves as a means of commending their hard work.

Our platform will get rid of fake reviews and feedback easily with the blockchain technology implemented. The first way is through the Artificial Intelligence(AI), which will monitor the comments made by a platform user before it is posted. A review that is filled with hate speech and derogatory words will be filtered out, while on the other hand each registered platform user on the CURATE decentralized fashion discovery platform will have a unique I.D., which will be used to verify their account. The verified accounts are the ones with trustworthy reviews that people can count on.

Rather than go with the trend of using traditional ICO route to run our crowdfunding, we have instead decided to use the Initial Exchange Offering(IEO) approach. This, in its own way, is more secure and trustworthy for everyone since all security concerns are handled and taken care of by the crypto-asset exchanges on which the Curate token is listed.

The crypto-asset exchanges are wont to do due diligence on crypto-asset projects seeking to get listed through Initial Coin Offerings (IEOs) on them. Huge damage may occur to a crypto-asset exchange reputation for listing scam crypto-assets, so major background checks are carried out on the founder of the prospective platform who is the IEO initiator, and the entire team,. This is one the fundamental reasons why the IEO is a more credible, and trustworthy capital formation strategy that has provided some solutions to some of the problems and challenges faced with the legacy ICO process now on the exit route.

Project overview

The CURATE project is simple in its own way, because it is a platform based on the blockchain decentralized network, as it will be built on the Ethereum Virtual Machine (EVM), with the active implementation of the ERC-20 token smart contract standard, the most popular and widely-used smart contract token standard on the Turing-complete blockchain.

The CURATE platform being a d'App means that it is a distributed system of service run and hosted by numerous systems around the globe and not one central authority, which in the legacy systems before the advent of Web 3.0, has held sway and ruled the tech jungle. All user data within our platform is secured with cryptographic algorithm.

Our platform acts as a discovery platform that curates men and women luxury fashion from inspiring brands. This method makes it simple for everyone engaging on the platform and will improve the quality and quantity of the services offered.

We also simplify fashion inspiration from around the world and ideas from far and wide means that there will be diversity in design with plenty to choose from for everyone.

One of the major things we really are after is security and safety of our platform user data. How can we guarantee that our clients are safe and their tokens secured? We have implemented the KYC protocol because one way or the other, our platform deals with the use of finances either physical or virtual and has a means of compliance to regulations made available for financial institutions. Know your customer regulation is being followed because with this we have some basic information about each and every individual on our platform.

This coupled with a form of verification through a recognized form of identification will help us keep the platform secure and also weed out unaccepted activities such as multiple accounts from one person on the platform.

The KYC regulation also helps in cases where theft of crypto-asset occurs. With the little information we have about every individual, it will be easier to try and track down and stop an individual's funds from being stolen by bad actors who are on a mission to give the crypto-asset space a bad name.

Some are of the opinion that sensitive user information gathering beats the purpose of applying blockchain to projects since the major functions of the blockchain network, according to them is supposed to be the protection of an individual's identity. In reality though, it doesn't take away the protection because all transactions will still be done securely in a Peer-to-Peer (P2P) manner, while the information of each user will be stored securely on the blockchain decentralized network, but not available for anyone to have access, unless members in the technical department. We assure our users that we value everyone's privacy and will keep the data of each and every individual away from prying eyes.

After KYC comes the AML and they both go hand in hand because the anti-money law puts us under compulsion to report fraudulent activities to relevant authorities. We highly frown against the use of our platform as a means to get money 'washed clean' as we will not hesitate to freeze an account associated with us if we notice money laundering activities being carried out on it.

When a user completes the KYC registration and has agreed to the AML regulations too, he also has to agree to the CFT rules means countering the financing of terrorism, and the updated FATF Recommendations affecting crypto-assets.

In no way should anyone be involved in using our platform as a means to fund terrorism as we will not take such activities with levity. These are one of the reasons why a user has to be able to complete the KYC registration for proper measures to be taken upon whoever wants to use the anonymity provided on the blockchain network as a leverage to commit crimes and atrocities.

Some of the things our platform has to offer are:

- Retailers large and small can showcase the best of the best fashion pieces on a single discovery platform.
- Community curates the content in exchange for CURATE tokens and membership perks.
- Blockchain technology prevents fake reviews, upvotes and provides a trusted platform for inspiration.

How does it work?

The first step to utilizing our services would be for an individual to sign up to the platform before being able to fully access all its features. The dashboard of our platform itself is going to be a Decentralized App (D'App) built on the blockchain, with smart contract transaction performance capacity, which also means that we will fully make use of the distributed ledger system as the backbone of the CURATE platform. Of course this begs the question why not use regular database instead of the blockchain? First of all, the platform is going to be reward-based, and implementing crypto-asset as a means of payment is very easy to achieve mainly because we are the ones facilitating the crypto-asset transaction. The decentralized blockchain system really brings a lot of advantages to regular business models. When the sales of apparels and fashion-related content is opened to the public, there will be a unique RFID protocol that will be integrated into the system as one of the countermeasures against fraud. With the RFID, the user can scan the material that they are purchasing to identify its authenticity and genuineness.

This remote frequency identification can be done via a mobile device with a camera which will scan the code of a purchased item. This will in turn pull up the history of the material and such a move will help get rid of individuals selling fake designer brands to the public because each seller has their own form of unique identity that can be labelled towards all RFID smart tags of their materials.

The RFID will also be useful for individuals who wish to know about where their cloth is coming from and what is the nature of the fabric. Some people prefer to go for items of clothing that are not manufactured at the detriment of the environment. With this RFID technology, it will be easier for everyone to fully identify whatever they purchase without having issues.

Another major advantage the blockchain decentralized network provides now is that one does not necessarily have to be a big brand to gain recognition. Our services will help grow small brands and give them enough recognition and thus also applies to independent start-ups that have no form of recognition. Each designer will be rated along with the quality of the goods and services offered. As time goes on, the quality of each individual's work will get upvoted and those with the majority of upvotes will be listed as trending.

Transparency is our watchword and we will not compromise that for anything. There are a number of features that will be integrated into our platform that will require the honest input of each individual and blockchain utilisation is the best option. All data entries will be stored on the blockchain and as such, once it is recorded it cannot be changed, as the blockchain data is immutable. It is permanently stored with a timestamp so alterations to the data entry is impossible unless of course if all systems storing the data are actively manipulated at the same time to modify what is recorded in a block.

Modifying data entry on a decentralized blockchain network is nearly impossible because of the nature of its complexity. The data is stored all over the world across different nodes with a hash and a timestamp before being recorded on the ledger. It is not logical for an individual to hijack thousands upon thousands of systems and modify the data all at the same time. This is the major advantage a decentralized network has over the regular database system or centralized networks, and is going to be the major stronghold for upholding transparency and honesty on the platform.

After signing up to the platform, the next thing a user can do is create content for their brand. Submitting and posting fashion items for sale will give users the chance to earn upvotes from members of the community which will make the poster eligible for getting a portion of the rewards pool based on the number of upvotes gotten.

After the content creation comes the voting and curating aspect which entails users having to upvote an item before it trends or becomes popular. Doing this will earn the user a curation reward dependent on the c-power the individual has.

We will generate income by the transactions carried out on our decentralized fashion discovery platform. The transaction fees will be reduced to a bare minimum but that will be the major means by which we obtain funding for the maintenance of our project. Asides from this, the retailers are given an option to obtain a pro account which a fee will be charged for on a subscription basis, and this account offers more opportunities for them such as a verified badge, being eligible for front page listings, priority support and coupon availability. We will not generate revenue from ads or by selling the sensitive information of our users as that is against our business model.

For starters, the Ethereum(ETH) crypto-asset will be used as the primary means of rewarding our early adopters in return for their engagement and contribution. The CURATE tokens will be available for use too, but will be as a secondary means of rewarding users. After getting our coin listed on coin asset exchange(s), and CURATE tokens gain value, we will make it the primary source of rewards in all parts of our platform.

The platform runs like a social media on its own that is based on fashion discovery concept. This brings the issue of performance and scalability. How well will the native blockchain hold against large influx of customers and transactions? It is not new that the blockchain technology is not very strong at handling intensive tasks and could get broken temporarily if burdened with too many activities running on it, or there could altogether be a blockchain bloat. So how would the blockchain technology manage to hold up with a platform like ours which may grow to have millions upon millions of users? The answer is in the sidechain. Since the project is at its cradle, we have not made provisions for a sidechain that will run along with the major blockchain, but such provision will be made available after a short while. The sidechain will be made readily available as soon as the need for it is required.

Smart contract will act as the transaction facilitator on the platform, and monitor the activities going on. The smart contract code calculates the rewards that will be given to each individual contributing to the platform, and this will be based on how much popularity they have gained overtime in correlation with their c-power. Smart contract also monitors every transaction made on the platform, and ensures that when a transaction is initiated from one end, there has to be a 2-way confirmation before it will mark a transaction successful and record it on the distributed ledger.

Curate Token (Utility not Security)

The Curate token (CUR8) has been created for utility purposes, and is thus not a security or equity token under any securities regulation in any jurisdiction, but a token with pure utility characteristics, features and functionalities. As such, it will be distributed on the Curate decentralized fashion discovery platform as a primary reward token overtime, as previously stated.

The need for Curate token supply increase may not be necessary unless there are more unique expansion cases for its use, which stretches the current Curate token 100m supply limit, and or pressing necessity for new Curate token minting, This is because this strategy in tokenomics keeps the Curate token market and Over The Counter (OTC) crypto-asset exchange platform value relatively immune from arbitrary price inflation, as is the case with the modern money mechanics that has been employed by central, and thus vulnerable banking and other financial incumbents for decades.

Curate token is an ERC-20 utility token smart contract standard compatible and exchangeable with many utility tokens which are majorly Ethereum-based tokens. In any case that crypto-asset exchange platforms adopt the Curate token as their primary means of transaction because of value and use case similarities that may mutually exist between them, this will cause value appreciation in the Curate token, and therefore further accelerate the Curate token network effect.

The crypto-asset that will be run on Curate fashion discovery platform will be:

Curate Token – This will be a reward-based cryptographic token, which as well will drive exchange for goods and services, leveraged for its utmost utility value maximization, and issued only during the IEO rounds.

IEO Details

Our IEO launch dates will be announced on our official website and all other relevant information regarding our token sales will also be made available there. Our token is going to be based on the Ethereum Blockchain ERC-20 wallet system will be implemented for it. All ERC-20 compatible wallets have the ability to hold and store the CURATE tokens.

During the initial stage of our project, trading may not be fully implemented initially but as the project gains ground and the user base expands, provision will be made for retailers to submit their fashion items on our platform with a potential sale guarantee and assurance. There will be different rate offers and options to get the item at a discount when the buyer makes the purchase with CURATE coins.

At launch, CURATE tokens will be listed on 3 exchanges then as time goes on, we will have our CURATE tokens listed on several more exchange platforms. The names of some of these exchanges are P2PB2B, Whitebit, CoinExchange, Livecoin and ExMarkets. These exchanges will be in charge of some of our tokens released to them and will assist in launching our IEO campaign especially to their old users who repose enormous amount of trust and confidence in the exchange platforms.

Our token will not be mineable, as they are pre-mined, but we will make provision for enough tokens to be released at launch that will cover the needs of everyone on the exchange platforms.

Further information about the IEO is provided as highlights below:

Token Information

Token name: CURATE token (CUR8)

Token ticker: CUR8

Token Type: Utility token

Tech: ERC20

Total supply: 100,000,000

Soft cap: \$1,000,000 USD

Hard cap: \$10,000,000 USD

Token price: \$0.10/CUR8

Accepted currencies: ETH, BTC

Contract address: 0x490dbf7884b8e13c2161448b83dd2d8909db48ed

Curate is our first crypto-asset, and will be sold via the crowdfunding IEO which will be split into 3 different phases.

Roadmap

Q1 2019

- ✓ Concept created by founder, James Hakim
- ✓ White paper first draft created
- ✓ Business plan first draft completed

Q2 2019

- ✓ Curate team members recruited
- ✓ Website and social media/telegram group created
- ✓ Demo preview of platform designed

Q3 2019

- 10,000+ telegram members active
- Approved for 1st IEO listing on P2PB2B.io

Q4 2019

- 1st IEO starts aiming to raise \$2.5M USD
- Development officially starts on Curate platform
- CUR8 token is listed on two exchanges, P2PB2B.io and WhiteBit.io and begins trading

Q1 2020

- 2nd IEO starts on 2 top CoinMarketCap approved exchanges
- Private-alpha launch of Curate platform open to telegram members
- CUR8 token listed on 2 more top exchanges, volume of trading increase

Q2 2020

- 3rd IEO starts on a DEX
- Public-beta version launched available to new members
- CUR8 token becomes top 50 token on CoinMarketCap by adjusted volume

Conclusion

The CURATE team is pleased that you took the time to go through this document and is positive that you will make an effort to bring this project to a reality. We have put in a lot of effort to try and contribute to the fashion community and we will not stop until our aims are achieved to the full. In case a part or portion of this document is unclear or you have questions you can contact us at <https://curate.style> and choose your preferred method of reaching out to us.

Thank you very much for the interest shown in being a part of our vision. We hope that with your contribution and effort our project will roll into reality
